

CDP States and Regions 2019:

List of countries for the Forest module

Version control: 04/02/2019

[Goal 3 of the NYDF \(New York Declaration on Forests\)](#) aims to reduce deforestation from economic sectors, such as mining, oil and gas exploration and extraction, and infrastructure development. Forests continue to face risks from resource-based economic growth and growing concessions for mineral and oil and gas extraction.

This year, states and regions in 43 selected countries have been asked to complete the forest module of the questionnaire. Countries were selected if they or at least one of their sub-national governments had endorsed the NYDF. The selected countries are:
