11:00 - 11:45	Deep-dive round 1 of 4
12:00 - 12:45	Deep-dive round 2 of 4
13:00 - 13:50	Lunch
14:00 - 14:45	Deep-dive round 3 of 4
15:00 – 15:45	Deep-dive round 4 of 4
16:00 - 16:15	Wrap-up session in plenary
16:15 - 17:30	Marketplace and networking
	Join a mingling and networking session with stands from CDP Supply Chain and Reporter Services teams and from sponsors of the event.

▼ For companies

Deep Dive: Navigating the 2023 CDP climate questionnaire changes

CDP questionnaire experts guide you through the most important climate change questionnaire and scoring methodology changes for 2023 in detail – including biodiversity and new EU taxonomy questions – so that you are equipped with a deeper understanding of the new and modified reporting requirements.

Deep dive: Navigating the 2023 CDP water security and forests questionnaire changes

CDP questionnaire experts guide you through the most important water and forests questionnaire and scoring methodology changes for 2023 in detail – including new questions on plastics and supplier engagement – so that you are equipped with a deeper understanding of the new and modified reporting requirements. Modules with datapoints directly related to Supply Chain will be covered here as well, to understand how to assess suppliers' performance on water security and forest risks throughout the value chain.

Deep dive: Fulfilling EU sustainable finance reporting requirements through CDP

From 2023, most companies and financial institutions will be required by law to disclose environmental information, including their alignment with the EU Taxonomy's environmental objectives. Higher-quality disclosures across environmental areas will be an expectation from stakeholders - requiring standardized data akin to financial reporting. In this session, CDP will dive deeper into the EU policy landscape, highlight data needs and uses, and introduce the integration of new questions on the EU Taxonomy.

Deep dive: Introduction to the SBTi and the Net-Zero Standard

Science-based targets give companies and financial institutions clearly defined pathways to cut emissions in line with 1.5°C. The corporate world has a crucial role to play in the transition to a net-zero economy: join us to learn how your organization can join the 2000+ companies now with science-Page 2 of 3

based targets, and gain a clear understanding of what it means to set a credible net-zero target through the SBTi standard.

Deep Dive: Navigating the 2023 CDP climate questionnaire changes for financial institutions

CDP questionnaire experts guide you through the most important climate change questionnaire and scoring methodology changes for 2023 in detail – including biodiversity and new EU taxonomy questions – so that you are equipped with a deeper understanding of the new and modified reporting requirements.

Deep dive: Fulfilling EU sustainable finance reporting requirements through CDP

From 2023, most companies and financial institutions will be required by law to disclose environmental information, including their alignment with the EU Taxonomy's environmental objectives. Higher-quality disclosures across environmental areas will be an expectation from stakeholders - requiring standardized data akin to financial reporting. In this session, CDP will dive deeper into the EU policy landscape, highlight data needs and uses, and introduce the integration of new questions on the EU Taxonomy.

Deep Dive: The route to net zero: setting credible targets through the Science Based Targets for financial institutions

Global financial institutions have rapidly joined the Glasgow Financial Alliance for Net Zero (GFANZ) initiatives to achieve net-zero portfolios by 2050. These commitments must be backed up by credible targets to reduce financed emissions in line with 1.5 °C. In this session, CDP experts will introduce the sector-specific methodology for financial institutions to set science-based targets through the SBTi for FI – and explore what data and frameworks can be used for a successful target approval.

Deep-Dive: How financial institutions can catalyze a nature-positive society

Impacts to nature including biodiversity pose significant risks to financial institutions (FIs) and macroeconomic financial stability. The expectation is increasing worldwide that FIs will conduct corresponding due diligence. Several FIs have made pledges and started developing screening tools, but to date portfolios, lending, and services have not changed noticeably. This session will share examples of existing frameworks and data, and explore with participants how to make progress on the key tasks needed for FIs to lead the way on nature-positive finance.
