	David Lammers, Deputy Director Corporate Engagement, <i>CDP Europe</i>
16:15 – 17:30	Marketplace and networking
	Join a mingling and networking session with stands from CDP Supply Chain and Reporter Services teams and from sponsors of the event.

For companies:

The agenda will be adjusted for companies that have not responded to CDP's questionnaires before

Deep Dive: Navigating the 2023 CDP climate change questionnaire

CDP questionnaire experts guide you through the most important climate change questionnaire and scoring methodology changes for 2023 in detail – including biodiversity and new EU taxonomy questions – so that you are equipped with a deeper understanding of the new and modified reporting requirements.

Deep dive: The benefits of disclosing water and forests data to your stakeholders through CDP's 2023 questionnaire

CDP questionnaire experts guide you through the most important water and forests questionnaire and scoring methodology changes for 2023 – including new questions on plastics and supplier engagement – so that you are equipped with a deeper understanding of the importance of disclosure to water and forest questionnaires. Modules with datapoints directly related to Supply Chain will be covered here as well, to understand how to assess suppliers' performance on water security and forest risks throughout the value chain.

Deep dive: Fulfilling EU sustainable finance reporting requirements through CDP

From 2023, most companies and financial institutions will be required by law to disclose environmental information, including their alignment with the EU Taxonomy's environmental objectives. Higher-quality disclosures across environmental areas will be an expectation from stakeholders - requiring standardized data akin to financial reporting. In this session, CDP will dive deeper into the EU policy landscape, highlight data needs and uses, and introduce the integration of new questions on the EU Taxonomy.

Deep dive: Introduction to the SBTi and the Net-Zero Standard

Science-based targets give companies and financial institutions clearly defined pathways to cut emissions in line with 1.5°C. The corporate world has a crucial role to play in the transition to a net-zero economy: join us to learn how your organization can join the 2000+ companies now with science-based targets and gain a clear understanding of what it means to set a credible net-zero target through the SBTi standard.

For financial institutions:

Deep Dive: Enabling financial institutions to assess and disclose greenhouse gas emissions with PCAF

Measuring emissions associated with financial activities is the starting point for financial institutions to manage risk, identify opportunities associated with greenhouse gas emissions and begin the journey towards decarbonization. In this session, an expert from PCAF will walk you through the Global GHG Accounting and Reporting Standard on financed emissions and how these can be reported through CDP.

Deep dive: Fulfilling EU sustainable finance reporting requirements through CDP

From 2023, most companies and financial institutions will be required by law to disclose environmental information, including their alignment with the EU Taxonomy's environmental objectives. Higher-quality disclosures across environmental areas will be an expectation from stakeholders - requiring standardized data akin to financial reporting. In this session, CDP will dive deeper into the EU policy landscape, highlight data needs and uses, and introduce the integration of new questions on the EU Taxonomy.

Deep Dive: The route to net zero: setting credible targets through the Science Based Targets for financial institutions

Global financial institutions have rapidly joined the Glasgow Financial Alliance for Net Zero (GFANZ) initiatives to achieve net-zero portfolios by 2050. These commitments must be backed up by credible targets to reduce financed emissions in line with 1.5 °C. In this session, experts will introduce the sector-specific methodology for financial institutions to set science-based targets through the SBTi for FI – and explore what data and frameworks can be used for a successful target approval.

Deep-Dive: How financial institutions can engage and align their portfolios to net-zero through the CDP Investor Signatory program

CDP'S disclosure system and database are at the foundation of ESG investing and lending and the data disclosed through the CDP platform provides global capital markets with high quality, consistent and comparable data at scale, in line with the TCFD recommendations. In this session CDP Capital Markets experts will introduce the program that equips investor signatories with access to the world's most comprehensive environmental dataset as well as collaborative engagement campaigns that are at the core of accelerating low carbon transition. A particular focus will be provided on quantitative metrics capturing greenhouse gas performance and implied temperature rise of companies.
