

End-to-end Solution for CDP

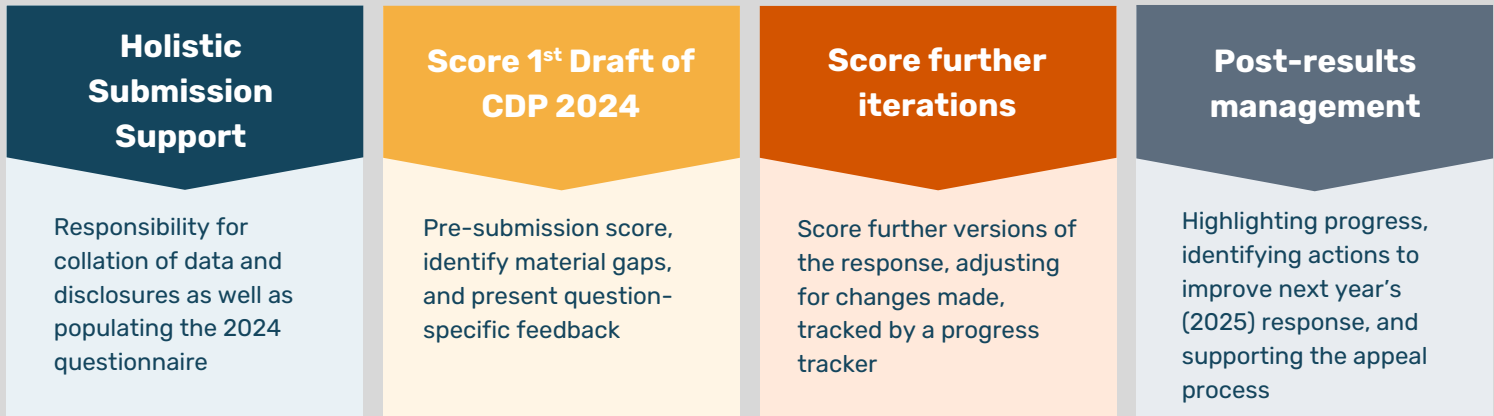

Has your company been requested to respond via a supplier, customer, or investor?

Have you considered responding but are put off by the complexities of the questionnaire and its methodology?

Has your CDP score stagnated or fallen, not reflecting your company’s sustainability progress?

Are you prepared for the new integrated questionnaire and updated disclosure portal?

We understand that CDP submissions can be challenging and time-consuming, and offer several services to assist clients. CEN-ESG offers full lifecycle support with CDP, taking full control or working collaboratively with in-house ESG teams. At the core of our offering is a **proprietary tool** used to assess and analyse responses pre-submission, identifying material gaps that limits your score, providing question-specific feedback, and support in implementing recommendations.

In 2023 we supported clients across a range of sectors and questionnaire themes, with 64% receiving a year-on-year increase in letter grade and strong scores for first-time responders.

Client Testimonials

Chris Dearing, Coats – Group Sustainability Director

“CEN-ESG supported Coats on our Climate Change and Water Security CDP 2023 submissions. Coats are very pleased with the progress made in both responses and were delighted to receive an uplift to a rating of B in Climate Change, up from B- in 2022.

The CEN-ESG proprietary scoring tool generated estimated scores, question specific feedback, and recommendations to enhance disclosures. Communication between our in-house environmental team and CEN-ESG was highly collaborative and efficient with fast responses to any queries.

CEN-ESG delivered a thorough post-result service including y-o-y progress, and identification of actions for 2024 to further improve our environmental disclosures and performance. We have a much better understanding of the CDP scoring and rating process thanks to the analytical capabilities of the proprietary tool and support offered by CEN-ESG.”

“CEN-ESG supported Tritax in the filing of the Big Box and Euro Box Climate Change questionnaires. Both companies received a creditable B score in 2023, with Eurobox achieving this on its inaugural submission.

The CEN-ESG tool with its question specific disclosure and scoring focus has enabled us to ensure the progress we have made on sustainability during the year has been fully reflected in our CDP scores.

CEN-ESG provided assistance across the whole CDP cycle from data collection and processing, to specific feedback and recommendations off the back of their proprietary scoring tool, which has greatly enhanced our understanding of the CDP process.”

Alan Somerville, Tritax Group – ESG Director
